Empowering Students with ADHD & Executive Function Disorder

a Personalized Academic Support Tool for Neurodivergent Learners

Lindsey Horowitz, IST477, Syracuse University

Introduction

Students with ADHD, EFD, and other disorders often struggle in traditional academic settings. The current tools built to support them currently have some issues that this project intended to uncover.

Questions

- What specific features of existing productivity tools help or hinder students with executive dysfunction?
- Which executive function components are most neglected by current tools?
- .

Materials and Methods

Literature Review -Studied executive function theory, ADHD research, and Universal Design for Learning to establish evaluation criteria for productivity tools

Comparative Tool Analysis - Evaluated 9 commonly-used productivity tools across 6 executive function components (Activation, Focus, Effort, Emotion, Memory, Action) using 5-star scale..

Gap Identification - Analysis revealed critical gaps: Activation and Emotion - exactly where students with executive dysfunction struggle most.

Prototype Development - Developed functional web site to address identified gaps.

Tool Analysis Results

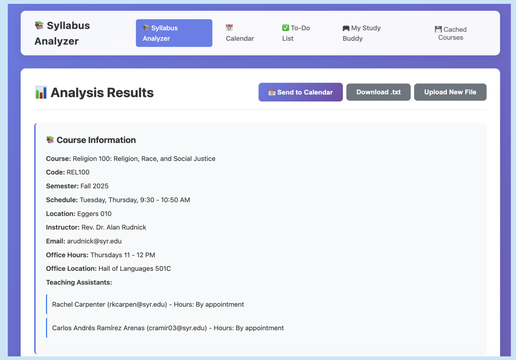

Tool	Activation	Focus	Effort	Emotion	Memory	Action
Google Calendar				★	★	
Notion		★	★		★	
Todoist	★				★	★
Trello	★					★
Phone Reminders						
Pomodoro Apps (Forest, Focus To-Do)		★				
AI Tools (ChatGPT, GPT plugins)	★			★		
Habit Trackers (Streaks, Habitica)			★	★		
Paper Planner / Bullet Journal				★		

Types of Executive Dysfunction

My Tool

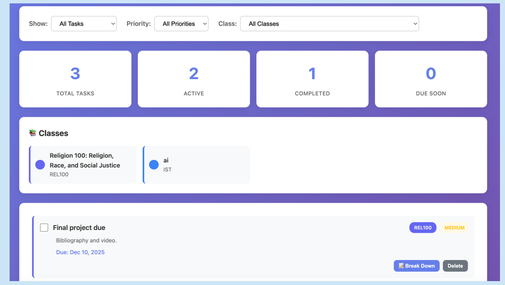

AI syllabus analyzer processes PDF uploads and automatically extracts course information, deadlines, and assignments into structured, understandable amounts

Target Areas- Activation, Effort, Memory

Color-coded calendar, instant class recognition, one-click filtering, and automatic synchronization with syllabus data and to-do lists

Target Areas- Activation, Focus, Memory

Priority-based task list with filtering by class, status, and urgency provides clear 'what's next' visibility to reduce decision paralysis.

Target Areas- Action, Focus, Effort

Other Features

"Study Buddy" Point earning system- Study Buddy rewards task completion with points for website customization. This celebrates user successes without penalties, guilt, or productivity shame.

Target Areas- Emotion, Action Effort

AI Assignment Breakdown Coach- Users can generates a detailed step-by-step breakdown with realistic deadlines, time estimates, and study tips.

Target Areas- Activation, Action, Effort
